

Consider a Regular Maintenance Program as Insurance to Protect the Life of Your Pool and Equipment

A regular maintenance program can provide the following benefits to the pool owner

PREVENTION

Regular checkups or visits allows Pool Rescue to come to you, this is usually done on a quarterly basis (every 3 months), but can be done as frequently as monthly, fortnightly or weekly during the peak swimming season as extra maintenance.

Generally it is organised as required to achieve the best possible performance for your pool water quality and equipment function.

Your pool service technicians, performing the regular maintenance visits, are SPASA (Swimming Pool and Spa Association) trained and qualified to service and repair your swimming pool and equipment investment.

HEALTHY LONG LIFE

Correct water balance and salt levels are required to maintain healthy water for bather comfort, sanitiser performance and equipment protection. Many new rendered pool interior finishes require strict chemical level control to ensure the maximum life expectancy and good looks are retained. Regular visits by Pool Rescue will achieve this task and will provide correct mineral and salt additions, "No more, No less" to save the storage of bulk and hazardous chemicals.

Your maintenance program can be tailored to the use of your pool and spa, more frequently during the swimming season to achieve the maximum use from the weather conditions, but still maintaining regular visits during the off season when neglect can cause unseen equipment and interior pool surface damage.

ALWAYS READY

Your swimming pool and spa is an entertainment area and your family and friends deserve to have healthy and safe environment to enjoy for the maximum time that the good weather conditions allow. The pool can be kept in tip top condition to be always ready when the hot weather hits or the special pool party is arranged.

Pool systems are becoming more sophisticated with automatic control units, heating systems, filtration and dosing systems installed. Regular checkups like your car maintenance, ensure that the chance of a breakdown is dramatically reduced, however, if something does fail, attention is usually super quick, as your SPASA trained pool professional is intimately acquainted with your system operation and dedicated to return the pool back to full operation.
